

Agile Project Management AI-Powered Second-Hand Marketplace

Agile Methodology
Iterative development • Continuous feedback

SPRINT 1: Core Marketplace Development
Duration: Weeks 1–2
Goal: Build the foundation of the marketplace platform

Objectives

- Create user login and registration
- Build seller and buyer features
- Set up database and backend APIs
- Create basic admin dashboard

Tasks

- Requirements analysis
- Database design
- User authentication
- Product listing module
- Product browsing and filtering
- Basic admin management

Deliverables

- Working marketplace prototype
 - Login/register system
 - Seller listing feature
 - Buyer browsing feature
 - Connected database
- Basic admin dashboard

Outcomes

- Users can create accounts
- Sellers can post items
- Buyers can browse listings
- Admin can monitor users/listings
- Core system is functional

Final Project Outcome
A live AI-enhanced second-hand marketplace with seller listing creation, and personalized recommendations.
